

Tristan Schonfeldt-Aultman

El Cerrito, California, USA

tropicaltisa@gmail.com 510-332-7700

Portfolio: <https://draginalo.github.io/>

Skills

- C++, C#, C, Typescript, Intel Assembly, Python, Swift, Java
 - Game Engines (Unity, Unreal Engine 5)
 - OpenGL, GLSL, HLSL
 - Agile, SCRUM, Version Control (Git)
 - Atlassian (Jira, Confluence)
 - Data Structures and Algorithms
 - 3D Math, Linear Algebra, Calculus
-

Education

Champlain College

Aug 2022 - May 2026

Burlington, VT

Bachelor of Science in **Game Programming**

Minors in **Mathematics and Computer Science**

GPA: 3.96 - Trustees' List & Summa Cum Laude

Projects

Lead Programmer: Choo Choo Boom Boom | *Unity C#* | *Team Size: 8 → 14*

Aug 2025 - May 2026

- Closely collaborated with lead designers, artists, and other programmers, utilizing rapid iterative prototyping with Agile Scrum framework to design, create, and transform prototypes into a shipped game (published on Steam).
- Designed and implemented gameplay systems, such as the main boss attack system, the main interconnecting spline track system, and VA dialogue system, keeping scalability, ease of use, and optimization at top of mind.
- Built a flexible in-engine cutscene tool that designers could use to make cutscenes in-engine without writing code.
- Onboarded new team members after our game got greenlit, introducing them to our systems and workflows.

Lurking Below | *Unreal Engine* | *Team Size: 7*

Jan - May 2025

- Programmed networked multiplayer interactions between 3 players, practicing client-server architecture, where 2 players work together to fix underwater machines and the 3rd player chases them down as a sea monster.
- Coded shaders for an underwater environment, utilizing depth based distortion and stencils, as well as building/architecting the main tasks for fixing the underwater machines.
- Closely worked with an interdisciplinary team of artists, designers, and other devs to rapidly iterate on features.

Vulkan Renderer | *Vulkan 1.3+, C++, GLSL* | *Team Size: Solo*

May 2026 - Present

- Programming and architecting my own modern Vulkan renderer, with compatibility for dynamic rendering.
- Streamlining and decoupled management of buffers, descriptor sets, swap chain, and build systems with CMake.
- Built a "Render Graph" pattern to minimize descriptor set bindings and dynamically inject memory barriers, with integration of both graphics and compute pipelines.

These and Other Projects Viewable Here: <https://draginalo.github.io/#projects>

Work Experience

Game Programming Tutor

Aug 2025 - May 2026

Champlain College

Burlington, VT

- Guided students through programming concepts, ranging from data structures and algorithms to graphics programming to game physics, to help facilitate their learning (mostly C++ focused).
- Focused on presenting clear suggestions, examples, and thought processes to help tutees naturally arrive at correct conclusions rather than simply providing answers or debugging for them.

Startup Full Stack Engineer

July 2023 - May 2025

EQ Community

Remote

- Collaborated with the CEO to program innovative, human in the loop, AI based (LLMs) recruiting tools.
- Launched multiple products using Typescript, Node.js, and Vercel, while onboarding multiple new developers.
- Managed APIs and databases for user queries, as well as created analytics tools in python to quantize user data.

Programming Intern | *Leahy Center for Digital Forensics & Cyber Security*

Oct 2022 - Dec 2022

Leahy Center for Digital Forensics & Cyber Security

Burlington VT

- Developed and maintained a seating chart web tool in Javascript on a small flexible team of other programmers.
-
